

How can we help your site?

In addition to trees inherent value to a property, tightening legislation is creating a climate that demands stronger action on the part of developers. **The Care of Trees** has a firm understanding of those laws and can help guide you to meet your commitments and in doing so minimize your costs and liability around these issues.

So when changes are drastic as with construction, mature trees can undergo stress which either cuts their life span short or makes them susceptible to insects and diseases. Such environmental factors are seldom understood or considered in the site planning and construction processes.

The Care of Trees can provide a variety of services for you during the planning and construction phases of any site project. They include:

Planning Phase Consulting Services

- **Feasibility Studies** - Analysis of potential sites for ecological “red flags”
- **Land Planning** - Forest inventories, delineations, and conservation plans
- **Site Layout** - Identification of conflicts and selection of conservation areas
- **Site Design** - Unique design alternatives to minimize impacts.
- **Preservation Planning** - Development of mitigation and protection plans
- **Specifications** - CAD ready specs for inclusion in plan documents

Construction Phase Field Services *(continued on other side)*

- **Root Pruning** - Protect trees by preventing equipment from tearing and mangling roots

(top to bottom) A tree site preservation plan; preserved chestnuts on a retirement site in Pennsylvania; matting used to cushion the ground and protect roots from equipment usage.

Construction Phase Field Services (continued)

- **Supersonic Air Excavation** - Technicians can evaluate root structure, look for any interfering wires or underground cables, and make recommendations
- **Tree Protection Fencing and Conservation Signage** - Safeguarding trees with visible warning signs
- **Mulching** - A necessity for trees impacted during construction, mulch provides physical protection from equipment, and it promotes a healthy soil environment to assist in reducing tree stress
- **Root Protection and Aeration Matting** - Provides a barrier to preserve the entire root systems from construction activities

Recent Preservation Projects

- **United States Supreme Court**
Washington, D.C.
- **Yale University**
New Haven, CT
- **Johns Hopkins University**
Baltimore, MD
- **Philadelphia Museum of Art**
Philadelphia, PA
- **Barat College**
Lake Forest, IL
- **Ft. Belvoir Family Housing**
Alexandria, VA
- **National Zoo – Asia Trail Phase I**
Washington, DC
- **Chicago Park District**
Chicago, IL

- **Lennar Emerald Fund Condominium Redevelopment**
Richmond, CA

Recent Awards and Recognition

National Arbor Day Foundation Awards

- Building With Trees

Tree Care Industry Association Awards

- Multiple Grand Awards
- Multiple Awards of Distinction
- Multiple Honorable Mentions

Staff Registrations and Licensing

- Maryland Licensed Professional Foresters
- Maryland Licensed Tree Experts
- ISA Certified Arborists
- Virginia & Maryland Pesticide Certifications

Long Term Care and Maintenance

- Tree and Shrub Pruning
- Insect and Disease Management
- SoilCareSM - our organic soil and root management program
- Fertilization and Nutrient Management Programs
- Cabling and Bracing
- Planting and Tree Replacement
- Lightning Protection
- Tree Appraisals and Consulting (CA only)
- Tree Preservation and Land Restoration
- Tree and Stump Removal
- Tree Risk Assessment
- Tree Protection during Construction
- Mulching
- Speakers for Garden Clubs or Group Meetings
- 24-hour emergency service

The **health of a tree** depends on the care it receives.

The **quality of service** depends on the care the client receives.

The Care of Trees is devoted to both by making trees part of the plan.
